

Abstract of the Disclosure

In a portable wireless display device docked/undocked with a docking station and capable of performing mutual communications with a host, disclosed is a portable
5 wireless display device capable of setting an operation mode upon docking. The portable wireless display device comprises an input unit for inputting a setting command to set an operation mode of the portable wireless display device in a docking state, a control unit for setting the operation mode corresponding to the setting command, and a storage unit for storing the set operation mode. Accordingly, the
10 present invention enables a user to set the operation mode of the portable wireless display device so as to prevent mode switchovers which are unnecessary or not intended by the user.
